Subject: RE: Draft email for Cosmo re: Washington Works

Roger, I added a little, as highlighted.

Region III is preparing a formal request to the Chemours Company for sampling for the compound, GenX in a number of public and private water supplies in the vicinity of its Washington Works, West Virginia facility.

Chemours also owns and operates a facility in Fayetteville, North Carolina where it manufactures GenX. Sampling conducted over the past few years at that facility has identified GenX in the Cape Fear River and numerous drinking water supplies both proximate to and downstream of the Fayetteville facility. An ORD study conducted around the Washington Works, WV facility in 2016, identified GenX in nearby surface water bodies. ORD has informed us that this study will be published in February 2018. Region III wants to be proactive and sample drinking water wells in the Washington Works area, in conjunction with ongoing sampling for PFOA conducted pursuant to a prior Consent Order. Sampling will help characterize the human exposure to GenX in the Washington Works area.

We have been coordinating with EPA Region 5, EPA HQs, Ohio EPA and WVDEP to draft the letter and anticipate having a draft by 12/29/2017 for the Water Division Directors signature.

Andy,

Please review and comment on Kate McManus's proposed memo to the RA. Thanks.

Rick/Roger-

Please edit as needed. Not sure who is the contact on the ORC side. I will check in with you tomorrow morning. Mary can you pass on to ORC POC. Thanks. Kate
